Working Prototype Known Problems Report

Product Name: QueuedUp

Team Name: QueuedUp

Release Date: July 22, 2020

Functions Not Working Correctly

- "Recent posts" dropdown button has no functionality
- Search button has no functionality
- We don't have a mechanism for different pages, all posts are loaded and displayed immediately. Many posts would cause infinite scrolling
- Account icon dropdown doesn't close when currently logged-in user's profile dialog opens
- Sometimes when logging in or viewing a profile, we have a mysterious error which we were unable to recreate, "CORS Missing Allow Origin"
- On user profile image change, we don't update the image on previous posts because we are limited on our reads quota on Firebase
- Increment/decrement (++/--) state changes only apply on refresh, so color and count changes are not automatically updated
- After a post is deleted, the comments for that post still remain in the database. This does not produce a noticeable effect on the web-page front end
